Re: AIR [REDACTED]

Richard,

a few issues:

1. PM10 and SOx cumulative freq. dist. histograms have charts for mill signal over background but not a corresponding one for background. NOX has this which is good to compare the 2 charts.
2. The contour plots must be excluded, don't these [REDACTED] listen?
3. I have not looked but if the Dioxin concentration chart is there it will need to go.

Pls get this reworked before we send to DPIWE
