Subject: Fw: Atmospheric modelling outputs for selecting
site of baseline and possible on going monitoring
station site for a pulp mill

[REDACTED]

I am having concerns [REDACTED] capacity to handle [REDACTED] and it is currently holding up the project. We have had an air monitoring station parked in Devonport for over a week and still do not have complete advice [REDACTED] on where to place it. We have an issue with the RPDC requesting 12 months data pre submission of IIS and we will have 3 months if we are lucky, this delay is very unfortunate. I have requested [REDACTED] submit a paper urgently for me to forward to the RPDC in relation to defending our position where we would use less than 12 months data and how this would be adequate to calibrate the TAPM model. The RPDC panel intend to meet later this week to consider this paper, so pls ensure this is expedited and pls. advise how we can get this whole thing moving forward.

Les Baker
General Manager - Bell Bay Pulp Mill Project
Executive Director - Gunns Plantations
